PRODUCT SKU: 13007 | 30 SERVINGS
PRODUCT SKU: 13009 | 90 SERVINGS

Why Choose Isotonix OPC-3?

Isotonix OPC-3 is one of the most revolutionary nutritional supplements available today. Between its unparalleled formula, including the clinically-studied ingredient Pycnogenol, and the revolutionary Isotonix Delivery System, there isn't a more effective antioxidant supplement on the market today.

Isotonix OPC-3's list of benefits is substantial. From promoting your cardiovascular health by helping you maintain healthy blood vessels and slowing anti-inflammatory activity, Isotonix OPC-3 provides complete antioxidant protection thanks to its unique formula.

Isotonix OPC-3 includes a combination of powerful bioflavonoids that protect against free radicals. This includes Pycnogenol, a super-antioxidant that is one of the most clinically-researched ingredients in the nutritional supplements industry.

Why should everyone take Isotonix OPC-3?

Everyone is subject to free radical damage and oxidative stress. Free radicals develop as byproducts of physiological processes that occur within the body. This damage does not cause noticeable harm at first, yet may add up over the years. This process is largely responsible for the aging process. Free radicals have been linked directly to premature aging, poor circulation, poor heart health and poor immune health. OPCs are the most powerful natural free radical neutralizers and you get the best of all OPCs by taking Isotonix OPC-3. Regular use every day is vital for keeping free radicals in check and a long, healthy life. Laboratory studies have shown that OPCs are more powerful antioxidants than vitamin C and vitamin E.

The Isotonix® Advantage

Isotonix products are formulated to deliver nutrients to the body at the optimal rate for maximum absorption. Isotonix® powders, when mixed with water, are buffered and isotonic; meaning they are a perfect match to your body's chemistry.
